Harvest established clumps															
Courgette	I O P H													90	90
Cucumber	I O P H													90	90
Outdoor ridge varieties															
Dill	I O P H													30	20
Sow direct in small batches															

Follow your conditions

These are broad UK windows. Follow the seed packet and local weather. Cold or exposed gardens start later; tender crops go outside only after the last frost. Harden off first.

Think across seasons

Winter harvests may come from the previous year's sowing. Autumn broad beans need hardy varieties and a mild site. Peppers and aubergines are best grown under glass.

Give plants room

P also means planting potato tubers, garlic cloves and onion sets. Spacings are a guide; check your variety. A dash means use the plant spacing / packet. *Runner beans: 60cm within a pair of rows; 150cm between pairs.
